

OLAYELE GBENGA AWUJOOLA

Data Analyst | Business Intelligence | Workflow Automation

+234 706 420 3742 | smarworld25@gmail.com | linkedin.com/in/olayele-awujoola | github.com/lreolami | Lagos, Nigeria | Open to Remote / Relocation

PROFESSIONAL SUMMARY

Results-driven Data Analyst with 4+ years of experience designing and executing medium- to high-complexity data analytics projects across finance, HR, and public sector domains. Engineered automated ETL pipelines processing 10,000+ daily records and deployed Power BI dashboards that reduced reporting time by 40%, directly enabling executive decision-making. Proficient in SQL, Python, Power BI, and workflow automation tools including Zapier, Make.com, and n8n, with deep expertise in data storytelling, KPI design, and translating complex datasets into actionable insights for stakeholder impact. Proven ability to lead full project lifecycles, coordinate cross-functional stakeholders, communicate data quality limitations transparently, and build scalable, self-sustaining reporting infrastructure aligned with organizational growth goals.

SKILLS

Data Analytics and Reporting: Exploratory Data Analysis (EDA), Statistical Modelling, KPI Design, Data Storytelling, Financial Analysis, Business Intelligence

Dashboard Development: Power BI (DAX, Power Query, Data Modeling), Tableau, Apache Superset, Excel (Advanced), Google Sheets

Programming and Querying: Python (Pandas, NumPy, Scikit-learn), SQL (MySQL, PostgreSQL, BigQuery), R, Jupyter Notebook, Git and GitHub

ETL and Data Pipeline Design: Automated ETL Pipeline Engineering, Data Transformation, Data Quality Validation, Data Reconciliation, BigQuery, MongoDB

Workflow Automation Tools: Zapier, Make.com, n8n, Google Apps Script, REST API Integration, Webhook and Event-Driven Workflows

Project Leadership: Stakeholder Coordination, Project Scoping and Timelines, Definition of Success, Cross-functional Collaboration, Runbook and Governance Documentation

Domain Experience: Agriculture, Finance, HR Analytics, Public Sector, IoT Sensor Data, Crypto and Fintech

WORK EXPERIENCE

Data Analyst | E-Know Consult | Ibadan, Nigeria | Mar 2024 – Present

- Designed and led high-complexity data analytics projects end-to-end, coordinating with Finance, Operations, and HR stakeholders to define project scope, set timelines, establish division of responsibility, and measure definition of success against organizational KPIs.
- Built and deployed Power BI dashboards with advanced DAX measures and optimized data models, improving reporting efficiency by 40% and enhancing data accuracy by 35%, enabling real-time decision-making for executive stakeholders.
- Developed and automated ETL pipelines using Python and SQL, processing 10,000+ records daily and reducing data preparation time by 60%, while implementing data quality validation checks that reduced downstream error correction by 35%.
- Designed and executed workflow automations using Zapier and n8n integrating REST APIs, Google Sheets, and internal reporting tools, eliminating approximately 15 hours per week of manual data processing and reducing task turnaround time across three business units.
- Evaluated and communicated data quality limitations to stakeholders, producing structured runbooks and governance documentation that enabled teams to independently operate, monitor, and maintain all automated reports and dashboards on Power BI and Google Sheets.
- Conducted advanced exploratory data analysis and statistical modelling across multiple sectors, translating complex datasets into actionable business intelligence insights and KPI-aligned reports that drove measurable operational improvements.

Data Science and Analytics Instructor | SQI College of ICT | Ibadan, Nigeria | Feb 2023 – Feb 2024

- Planned and delivered hands-on data analytics curriculum to 50+ learners covering SQL, Python, Power BI, ETL pipeline design, and data storytelling, achieving a 90%+ project completion rate and significantly improving learner adoption of BI tools.
- Guided students through medium- to high-complexity analytics projects, from defining scope and timelines to building dashboards, automating data workflows with Zapier and Apps Script, and producing final reports aligned with real-world business requirements.
- Introduced practical application of Power Query, DAX measures, and reporting frameworks, building learners' capacity to design scalable data models and deliver actionable insights to stakeholder audiences.
- Produced comprehensive workflow documentation, configuration guides, and governance runbooks for all student projects, establishing standards for independent operation and report maintenance without ongoing instructor dependency.

Research and Data Officer (Part-time) | PIDI-Nigeria | Bauchi, Nigeria | Nov 2020 – Dec 2022

- Collected, transformed, and analyzed structured and unstructured field data, ensuring accuracy and consistency for policy reporting, program monitoring, and evidence-based decision-making by government stakeholders.

- Developed data reports and visualizations using Excel and survey tools, streamlining data collection workflows and reducing manual processing time by 30% while improving data quality standards across concurrent national programs.
- Mapped end-to-end operational data flows, identified manual bottlenecks, and implemented no-code automation solutions for field teams, accelerating insight delivery timelines and reducing data entry error rates.

KEY ANALYTICS PROJECTS

Smart Water Distribution Analytics System | IoT, MQTT, ThingsBoard, Python

- Architected a real-time BI and operational analytics platform for Lagos State Water Corporation, integrating telemetry from IoT flow and pressure sensors into live dashboards with time-series data models and anomaly detection pipelines that triggered proactive infrastructure alerts.
- Designed scalable ETL workflows for continuous sensor data ingestion, transformation, and visualization, enabling operations teams to monitor system performance and make data-driven infrastructure decisions in real time.

HR Analytics: Attrition Prediction Engine | Python, Scikit-learn, Power BI

- Developed predictive analytics models using Python and machine learning to identify employee attrition risk factors, achieving an AUC of approximately 0.85, and translated model outputs into interactive Power BI reporting dashboards for stakeholder insight and KPI tracking.
- Applied advanced feature engineering and exploratory data analysis to generate actionable workforce analytics reports, enabling HR leadership to make evidence-based talent retention decisions.

E-Commerce Sales Analytics Dashboard | Power BI, DAX, SQL, Excel

- Created a multi-page Power BI dashboard with 20+ DAX measures integrating data from SQL databases and Excel sources, enabling advanced KPI tracking, time-series sales analysis, and trend reporting across product categories and regions.
- Optimized Power Query data transformation and data modeling layers for high-performance analytics, reducing report load time and ensuring dashboards remained consistently up to date for stakeholder review.

AI-Powered Applicant Tracking System | n8n, Google Drive, Python, REST API

- Architected a fully automated recruitment analytics pipeline integrating Google Drive for CV ingestion, building structured data extraction workflows, configuring AI-driven screening decision logic, and triggering conditional email notifications, eliminating approximately 8 hours per week of manual processing.
- Produced complete governance runbooks and workflow documentation enabling the hiring team to independently operate, audit, and maintain the automated system with zero engineering dependency.

Crypto Market Monitoring Automation | Make.com, CoinGecko API, Airtable, Google Sheets

- Designed and deployed an end-to-end market monitoring automation platform integrating CoinGecko API for live price ingestion, configuring conditional alert workflows via Gmail and Telegram, and logging all events to Airtable and Google Sheets with a real-time analytics dashboard.

Social Media Intelligence Monitor | n8n, SerperDev, X API, Airtable, Google Sheets, Telegram, Slack

- Architected a real-time social media monitoring and analytics automation on n8n, integrating SerperDev and X API for multi-source signal ingestion, defining filtering and data mapping rules, and routing structured intelligence alerts to Telegram and Slack with full Airtable and Google Sheets logging for trend analysis and reporting.
- Built reusable workflow templates and data validation checklists enabling repeatable deployment across different monitoring targets, replacing approximately 6 hours per week of manual social monitoring with fully automated, real-time intelligence delivery and structured data storage.

AI-Powered Customer Assistance Chatbot | Python, REST API, NLP, Webhook Integration

- Designed and deployed an AI-powered customer assistance chatbot integrating natural language processing capabilities with REST API webhooks, enabling automated query resolution, intelligent response routing, and seamless escalation logic for unresolved requests to human agents.
- Built structured conversation logging and analytics workflows to capture interaction data, track resolution rates, and generate performance reports, providing stakeholders with actionable insights into customer engagement patterns and chatbot effectiveness.

EDUCATION

B.Sc., Computer Science — Federal University, Oye-Ekiti | 2026 | GPA: 4.2/5.0

HND, Biochemistry — Rufus Giwa Polytechnic, Owo | 2018 | GPA: 3.3/4.0

CERTIFICATIONS AND PROFESSIONAL DEVELOPMENT

- Diploma in Data Science — SQI College of ICT, Ibadan (2023–2024)
- Data Analytics with Power BI — 720 Degree Business School, Ogun (2023)
- Database Management Systems (DBMS) — Aminu Jalam Statistical Software Technology, Bauchi (2022)
