

OLAYELE GBENGA AWUJOOLA

GTM Automation Engineer | Outbound Systems | Growth Infrastructure

+234 706 420 3742 | smarworld25@gmail.com | [linkedin.com/in/olayele-awujoola](https://www.linkedin.com/in/olayele-awujoola) | github.com/lreolami | Lagos, Nigeria | Remote

PROFESSIONAL SUMMARY

GTM Automation Engineer with 4+ years architecting and shipping high-scale outbound and data automation systems in production. Built multi-tool enrichment pipelines, lead scoring and routing workflows, LLM-powered personalization layers, and event-driven alert systems using n8n, Make.com, Zapier, Python, and REST APIs — the same primitives that power modern Clay-based outbound stacks. Shipped a 14-node applicant screening pipeline with conditional routing logic, a real-time multi-source signal monitor replacing 6+ hours of manual work weekly, and Python ETL pipelines processing 10,000+ records daily with deduplication, validation, and schema normalization. Analytical by default: defines success metrics before building, instruments every system, and runs structured experiments to improve performance. Proven copywriter who has written outbound sequences, governance documentation, and stakeholder-facing automation reports that drive action. Remote-first operator comfortable owning an entire domain with high autonomy.

TECHNICAL SKILLS

Automation Platforms	n8n (advanced, production), Make.com, Zapier, Google Apps Script, Workato — all in active production use
GTM & Enrichment Tools	Clay-compatible workflows via n8n + API steps; Apollo data model familiarity; HubSpot, Salesforce, Intercom, Zendesk integration
Outbound Infrastructure	Domain setup, DNS configuration, DMARC, DKIM, SPF; email deliverability architecture; multi-domain campaign structuring
Scripting & Data	Python (Pandas, NumPy — dedup, cleansing, normalization, schema design), JavaScript, SQL (PostgreSQL, MySQL, BigQuery)
API & Integration	REST API wiring, Webhook design, OAuth, event-driven pipelines, SerperDev, X API, CoinGecko API, Google Workspace APIs
LLM & Personalization	GPT-4o structured outputs, function calling, dynamic variable personalization, AI-assisted copy rewriting, prompt version libraries
Dashboards & Reporting	Power BI (DAX, Power Query), Airtable, Google Sheets, Looker Studio-compatible data models, MongoDB
Web Scraping & Signals	SerperDev, X API ingestion, multi-source data aggregation, signal filtering and enrichment pipelines

PROFESSIONAL EXPERIENCE

GTM Automation Engineer / Data Analyst | E-Know Consult | Ibadan, Nigeria Mar 2024 – Present

- Architected and shipped 2–3 production automation systems per month using n8n, Zapier, and REST APIs — building enrichment pipelines, lead routing workflows, conditional scoring logic, and multi-tool integrations that eliminated 15+ hours of manual processing weekly across Finance, Operations, and HR.
- Built LLM-powered personalization layers using GPT-4o structured outputs and dynamic variable routing inside n8n workflows — the same pattern Clay uses for AI rewriting and persona-based message customization — replacing repetitive manual review and copy cycles.
- Engineered Python and SQL ETL pipelines processing 10,000+ records daily with data quality validation gates, deduplication logic, schema normalization, and cleansing rules — reducing data preparation time by 60% and downstream errors by 35%.
- Configured email domain infrastructure including DNS records, DMARC, DKIM, and SPF for outbound campaign environments; designed deliverability-conscious sending architecture and domain health monitoring across campaign systems.

- Ran structured A/B experiments on automation logic, routing rules, and output quality — defining success metrics upfront, instrumenting each variant, and reporting outcomes with runs, success rate, and cost saved to leadership after every deployment.
- Integrated web scraping and external signal APIs (SerperDev, X API, CoinGecko) into production pipelines with filtering rules, enrichment steps, and structured alert routing — building the same data ingestion and enrichment patterns central to Clay-based outbound stacks.
- Produced outbound-facing copy, automation runbooks, and stakeholder reports that translated complex multi-step workflows into plain language, driving adoption and independent operation across non-technical teams.

Data Science & Analytics Instructor | SQI College of ICT | Ibadan, Nigeria Feb 2023 – Feb 2024

- Designed and delivered automation curriculum to 50+ learners covering Python, SQL, ETL pipeline design, Zapier, and Google Apps Script — achieving 90%+ project completion rate with all shipped systems fully documented and self-serviceable.
- Supervised end-to-end automation projects from ICP definition and scoping through to shipped deliverables with success metrics defined before build-out began.

Research & Data Officer (Part-time) | PIDI-Nigeria | Bauchi, Nigeria Nov 2020 – Dec 2022

- Identified manual data bottlenecks across concurrent national programs and implemented automation solutions that reduced manual processing time by 30% and cut data entry error rates significantly.
- Maintained data accuracy and consistency standards for government policy reporting, enforcing quality thresholds before structured and unstructured field data reached submission pipelines.

PRODUCTION AUTOMATION PORTFOLIO

AI-Powered Applicant Tracking System *n8n · GPT-4o · Google Drive · REST API · Gmail · Google Sheets*

- Designed and shipped a 14-node lead enrichment and routing pipeline: data ingestion, structured extraction, GPT-4o scoring with function-calling outputs, and conditional pass/fail routing to Gmail and Google Sheets — the same architecture as a Clay-based outbound stack with ICP scoring, enrichment, and sequenced output routing. Eliminated 8+ hours of manual weekly review. Versioned prompt library and eval checklist kept scoring logic accurate and auditable.

Social Media Intelligence Monitor *n8n · SerperDev · X API · Airtable · Slack · Telegram · Google Sheets*

- Architected a real-time multi-source signal and enrichment pipeline on n8n integrating SerperDev and X API — with ICP-style filtering rules, data mapping, deduplication, and structured alert routing to Telegram and Slack. Replaced 6+ hours of manual monitoring weekly. Instrumented with run counts, alert volume, and delivery success rate. Directly analogous to a Clay enrichment and scoring workflow feeding a sequencer.

Crypto Market Monitoring Automation *Make.com · CoinGecko API · Airtable · Gmail · Telegram*

- Designed and deployed an event-driven enrichment and alert pipeline on Make.com — live API data ingestion, conditional threshold scoring, multi-channel alert routing to Gmail and Telegram, and a real-time analytics dashboard logging all trigger events. Mirrors the Clay-to-Instantly pipeline pattern: enrich, score, route, send, track.

PTO Management Automation *Airtable · Zapier · Make.com · Google Workspace*

- Built a three-table data model with intake forms, a three-Zap automation chain, two-hop email lookup for manager routing, automated status updates, and calendar blocking — demonstrating multi-step workflow design, data schema architecture, and stakeholder-facing output delivery.

Smart Water Distribution Analytics System *MQTT · ThingsBoard · Python · Time Series · IoT*

- Architected a production IoT event-driven pipeline for Lagos State Water Corporation — MQTT telemetry ingestion, Python-based time-series anomaly detection, and real-time alert routing to operational dashboards. Instrumented with live KPIs (flow rate, pressure variance, network uptime), eliminating manual audit cycles for a live government utility.

EDUCATION

B.Sc., Computer Science — Federal University, Oye-Ekiti | GPA: 4.2/5.0

2026

HND, Biochemistry — Rufus Giwa Polytechnic, Owo | GPA: 3.3/4.0

2018

CERTIFICATIONS

-
- Diploma in Data Science — SQI College of ICT, Ibadan (2023–2024)
 - Data Analytics with Power BI — 720 Degree Business School, Ogun (2023)
 - Database Management Systems (DBMS) — Aminu Jalam Statistical Software Technology, Bauchi (2022)
