PROFESSIONAL SUMMARY

Data Analyst with 4+ years of experience owning the full data lifecycle — from ETL pipeline engineering and cloud warehouse modelling through to machine learning model deployment, product analytics, and executive-level data storytelling. At E-Know Consult, automated pipelines processing 10,000+ daily records cut data preparation time by 60%, while Power BI and Tableau dashboards reduced manual reporting overhead by 40% across three business units. Skilled in Python and SQL for complex querying, predictive analytics, A/B testing, and statistical analysis across Snowflake, PostgreSQL, and MySQL. Recognised for maintaining data pipeline reliability and enforcing data quality standards end-to-end. Works naturally in cross-functional collaboration with product, engineering, and operations teams, and communicates analytical findings with equal clarity to technical peers and non-technical leadership — turning dense operational data analysis into decisions that stick.

CORE COMPETENCIES

Languages:	Python (Pandas, NumPy, Matplotlib, Seaborn) SQL R DAX Power Query
BI & Visualisation:	Power BI Tableau Metabase Excel (Advanced) Google Sheets
Cloud & Warehousing:	Snowflake PostgreSQL MySQL MongoDB BigQuery (working knowledge)
Data Engineering:	ETL / ELT Pipeline Design Data Pipeline Reliability REST APIs MQTT Git / GitHub
Analytics:	KPI Design & Tracking Product Analytics A/B Testing Statistical Modelling RFM Segmentation Operational Data Analysis
ML & Modelling:	Machine Learning Predictive Analytics Scikit-learn XGBoost Random Forest Feature Engineering Anomaly Detection
Soft Skills:	Data Storytelling Stakeholder Communication Cross-functional Collaboration Data Quality Management

PROFESSIONAL EXPERIENCE

Data Analyst — E-Know Consult

Lagos, Nigeria | March 2024 – Present

- Designed, built, and maintained production Power BI and Tableau dashboards tracking KPIs across three business units, reducing manual reporting overhead by 40% and improving data accuracy by 35% — giving leadership real-time operational data analysis visibility that previously required multi-day manual aggregation.
- Engineered automated Python ETL pipelines that ingest, clean, validate, and load 10,000+ records daily into Snowflake, cutting data preparation cycles by 60% — with data quality checks embedded at every pipeline stage to ensure data pipeline reliability across all downstream reporting workflows.
- Modelled and maintained Snowflake schemas to consolidate data from five disparate source systems, improving query performance and enabling cross-functional collaboration across product, finance, and operations teams that was not previously possible with siloed databases.
- Led product analytics initiatives — defining KPI frameworks, tracking feature performance, and conducting A/B test analysis on operational initiatives — translating findings into prioritised roadmaps adopted at C-suite level.
- Built predictive analytics models and machine learning pipelines in Python to surface investment risk signals and market trend anomalies across five industry sectors, delivering data storytelling narratives and visualisations that directly informed executive portfolio allocation decisions.

- Partnered with engineering and operations leadership as a key stakeholder communication bridge — presenting complex statistical findings in plain language and driving data-driven decision-making across all three business units.

Data Science Instructor — SQI College of ICT

Ibadan, Nigeria | February 2023 – February 2024

- Designed and delivered a full data science curriculum covering Python, SQL, machine learning, statistical modelling, and BI tools to 50+ students — achieving a 90%+ capstone project completion rate and measurably improving post-course employment outcomes.
- Mentored student teams through applied capstone projects in HR analytics, e-commerce product analytics, and financial forecasting — guiding each project from data quality assessment and cleaning through to stakeholder-ready dashboards and data storytelling presentations.
- Introduced hands-on lab environments using Jupyter Notebook, Scikit-learn, and Power BI, directly bridging academic instruction with the predictive analytics and operational data analysis tooling students encountered in industry roles.

Research and Data Officer — PIDI-Nigeria (Part-time)

Bauchi, Nigeria | November 2020 – December 2022

- Collected, cleaned, and analysed qualitative and quantitative datasets underpinning national social impact and policy advocacy campaigns — maintaining strict data quality standards across all field data before presentation to federal government ministries and international development partners.
- Produced data-driven reports and data storytelling visualisations that directly shaped programme design recommendations adopted by partner government agencies.
- Deployed SurveyMonkey and Excel-based field data collection tools that reduced entry errors and accelerated insight delivery timelines by an estimated 30%.

KEY PROJECTS

Smart Water Distribution Analytics System — Lagos State Water Corporation

IoT | MQTT | ThingsBoard | Python | Time-Series | Anomaly Detection | Operational Data Analysis

- Architected and deployed a real-time IoT infrastructure monitoring pipeline ingesting live telemetry from flow and pressure sensors via MQTT into ThingsBoard — maintaining data pipeline reliability 24/7 and serving operational dashboards to Lagos State Water Corporation engineers around the clock.
- Built Python time-series predictive analytics and anomaly detection pipelines for proactive identification of pressure drops and fault indicators, reducing the lag between fault occurrence and field team response across the entire distribution network.
- Delivered executive-facing KPI dashboards and data storytelling reports that eliminated manual infrastructure audit cycles and gave senior management actionable operational data analysis for the first time.

HR Analytics — Employee Attrition Prediction Engine

Python | Scikit-learn | XGBoost | Random Forest | Machine Learning | Predictive Analytics

- Trained and validated a Random Forest and XGBoost ensemble machine learning model on 1,470 employee records, achieving AUC ~0.85 on held-out test data through disciplined feature engineering and hyperparameter tuning.
- Engineered feature importance analysis identifying the top five attrition risk drivers, enabling HR leadership to direct targeted retention spend at the highest-risk 15% of the workforce — directly analogous to credit scoring and predictive analytics prioritisation logic.
- Delivered model outputs as an interactive stakeholder communication report that translated complex predictive results into concrete, actionable business strategy through clear data storytelling.

E-Commerce Sales Analysis Dashboard

Power BI | DAX | Python | Product Analytics | RFM Segmentation | Time Intelligence

- Built a multi-page product analytics Power BI dashboard across 5,000+ transactions covering revenue trends, productcategory performance, customer RFM segmentation, and year-over-year growth — enabling data-backed inventory and marketing decisions.
- Authored 20+ DAX measures including rolling averages, YTD revenue, month-over-month growth rates, and cohort retentionmetrics to power dynamic time-intelligence visuals.

Agricultural Investment Financial Model — £100M Farm Project

[Excel](#) | [Power BI](#) | [Scenario Analysis](#) | [Financial Modelling](#) | [Predictive Analytics](#) | [IRR](#) | [ROI](#)

- Built a scenario-based predictive analytics and financial forecasting model projecting ROI, IRR, and cash flow under threerisk scenarios for a £100M agricultural investment.
- Delivered Power BI dashboards and data storytelling presentations supporting investor decision-making, translating complexmodel outputs into clear, decision-ready narratives for non-technical stakeholders.

EDUCATION

B.Sc., Computer Science — Federal University, Oye-Ekiti

GPA: 4.1/5.0 | 2026

HND, Biochemistry — Rufus Giwa Polytechnic, Owo

GPA: 3.3 / 4.0 | 2018

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Diploma in Data Science — SQI College of ICT, Ibadan (2023 – 2024)
- Data Analytics with Power BI — 720 Degree Business School, Ogun (2023)
- Database Management Systems (DBMS) — Aminu Jalam Statistical Software Technology, Bauchi (2022)
